

ORR (Open Records Requests)

S2|DATA offers secure, convenient & responsive services for local Municipalities and other county, state, and federal government agencies. We cheerfully and expertly create an environment enabling your Legal and Information Management teams to focus on higher-level tasks within the organization by providing **turnkey services for the management of Open Records Requests (ORR)**.

Responsive data is housed in a secure and cost-effective platform with, excellent, flexible search and filter capabilities. We remove the most time-consuming steps in the process by hosting the data, performing searches, and delivering potentially responsive information back for review prior to release.

We offer the **day-to-day ORR management**, by our team, your team, or a blend of both. S2|DATA has experienced ORR technologists who handle the entire process, from the Open Records request, delivery of records, audit trails, and data processing for review. Should the records be involved in future legal matters, the data connector between your Open Records environment and your preferred eDiscovery platform is as seamlessly resolved.
